### Short Description

The Masport Super Scrubber / Moistre Trap is designed to be a dual-function moisture trap (scrubber) and a secondary shut-off trap on liquid and semisolid handling systems which is extremely effective in protecting your vacuum pump. Masport's exclu

### Description

The Masport Super Scrubber / Moisutre Trap is designed to be a dual-function moisture trap (scrubber) and a secondary shut-off trap on liquid and semisolid handling systems which is extremely effective in protecting your vacuum pump. Masport's exclusive design provides superior protection under a wide range of operations. Standard N.P.T. fittings simplify installation and provide an air tight connection to any 20 to 400 C.F.M. vacuum pump. Every Super Scrubber is pressure tested for air tightness. Available primed, painted and fitted with easymouting brackets in vertical and horizontal styles.

Horizonatal style scrubbers come in left mount, right mount, and frame mounted variations. Pipe size is also a very important consideration. In order to utilize the total capacity of your vacuum pump, all pipe fittings should have a minimum inside diameter equal to the N.P.T of the vacuum pump. Specialized hose adaptors, available from your Masport representative, are highly recommended to adapt 2 1/2" N.P.T. to 3" ID hose. These have been made available due to the fact that 2 1/2" hose inserts have a considerably smaller diameter than 2 1/2" N.P.T.
